## **R&D/TFI GP1300R DIGITAL FUEL INJECTION CONTROLLER**

The R&D/TFI digital fuel injection control box kit comes complete, preset, and ready to install for all stock, stage 1 and stage 2 performance packages! The easy 10 minute installation of the R&D/TFI control unit will give your GP 1300R's engine the proper A.F.R. (air fuel ratio) needed to produce an additional 12 horsepower boost between 1,000 and 5,000rpm's. Expect a noticeable bolt of low end power and acceleration, and strong pull through the midrange!

Although the R&D/TFI fuel controller arrives preset, simple adjustments to the controller will deliver plenty of fuel to accommodate just about any combination of aftermarket modifications anyone can imagine! Once the R&D/TFI fuel controller is adjusted, it maintains perfect adjustment until your next demand. Once you install the R&D/TFI fuel controller and experience the dramatic increase in power and acceleration, there's no turning back!

Check the R&D website for tuning information updates located in the R&D Speed Zone.
